

SomnoSuite Anesthesia System Reviews

I use a SomnoSuite/RightTemp system purchased from Kent in May of this year – it's been awesome! Before that, I was renting a Traditional Isoflurane Vaporizer system from our institution's animal facility, and using a very bulky circulating water heating pad, so we've been very happy with the new unit. **Elizabeth Dempsey, Ph.D - Northwestern University** *Evanston, IL*

I have been using the SomnoSuite with Integrated Digital Vaporizer (IDV) in my in-vivo experiments. The precise control of anesthetic allows me to use less than 1cc of isoflurane during my 8-hour recording. The SomnoSuite is highly reliable and fully automatic. Included inside my SomnoSuite are the two additional modules; the MouseVent Automatic Ventilator and the MouseSTAT Pulse Oximeter/Heart Rate Monitor, which fits easily into my small lab space. I highly recommend this product. **Chao Ma, Assistant Professor - Yale University School of Medicine** *New Haven, Connecticut, United States*

Your anesthesia system has been a game-changer for our lab. **Kirsten Kost - Emory University School of Medicine** *Atlanta, GA*

What I like about the system is the easy-operation and precise control of the drug amount, and saving reagent. **Wenjing Zhang, PhD - University of Tennessee** *Memphis, TN*

We are enjoying our original SomnoSuite so much that we ordered 2 more. We found they are relatively easy to setup and start. **Jeffrey A. Jones, PhD - Medical University of South Carolina - VA Research Service** *Charleston, SC*

What I like SomnoSuite thing that it is a small and light so that it is easy to move anywhere I want. **Areum Yoon-Transgenic Animal Core Technician - Fred Hutchinson Cancer Research Center** *Seattle, WA.*

We bought a SomnoSuite from you guys 10 months ago and we are loving it. **Sean McGrail - Scientific Laboratory Manager, University of Florida** *Gainesville, F*

I purchased 3 Sommosuite tabletop anesthesia setups and we love them! **Jessica Blake, MBA - University of California San Diego/VA San Diego Healthcare Systems** *San Diego, CA*

I am using the Kent scientific somnosuite for rat anesthesia. We are interested in recording neural signals from the somatosensory cortex, and the somnosuite allows us to lower the anesthesia level to such extent that we get data with high SNR. The cherry on top is the super low waste of isoflurane that we are using, virtually eliminating the need for a strong exhaust, and we also love the fact that it draws the oxygen from room air and no extra oxygen setup is needed. **Dr. Wasif Afsari Khan, PhD - University of Texas Health Science Center***Houston, TX, US*

We work well with the SomnoSuite system, it is very useful for our mouse surgeries. **Raluca Ciochina, Research Program Coordinator - University of California San Diego***La Jolla, California*

We are using the SomnoSuite system to do anesthesia in rats and mice while monitoring their body temperature and have had a great experience so far. **Rida Mourtada, PhD. - Lyica Therapeutics***Boston, MA*

SomnoSuite System works great! We have two and both are fantastic. **Kayenat Bakhshi, Research Technician, University of Arizona***Tucson, AZ*

We purchased 2 of the Kent Scientific SomnoSuite systems about 6 months ago. Works very well! **Orazio Slivano, Histology Research Manager, Augusta University***Augusta, GA*

I love my SomnoSuite system and use it almost daily! I enjoy teaching others here at Purdue about its qualities! **Carol Dowell - Purdue University***West Lafayette, IN*

I use the somnosuite for live surgeries in the head/neck of mice. It's been great! **Dr. Robert Saddawi-Konefka, MD, PhD - University of California San Diego***San Diego, CA*

We are using the SomnoSuite now for our anesthesia delivery. The labs really seem to like it and the animals wake up so much quicker. **Heather Maddox B.S., RVT - Indiana University***Indianapolis, IN*

I love the SomnoSuite System. Very versatile. **Thomas E. Todd, DVM, CPIA - University of Houston***Houston, TX, US*

"We really like the degree of control the system gives us, it's very intuitive and easy to use.

We have replaced all our other anesthesia systems with SomnoSuite." **Peyton Bohnsack, PhD - University of Illinois at Chicago***Chicago, IL*

I really love the SomnoSuite system, it is very easy to use, super portable, and much less expensive than the old machine we used. We currently have 6 so we really like the product! **Miguel Jorge - Indiana University School of Medicine Indianapolis, IN**

I love the SomnoSuite system, because it is digital, we have absolute control over the delivered anesthetic, it has an intuitive user interface with an easy-to-use touchscreen, it can be enhanced with other functionalities within the same device (e.g. pulse oximetry, CO2 measurements etc.), it can be used with multiple animals at the same time, and many other functions that analog systems do not offer. Our lab uses only SomnoSuite, and I propose the system to other colleagues as well. **Antonis Pouliopoulos, PhD - Columbia University New York, NY**

I love it. It works very easily and I have no trouble at all. I find it simple to use and excellent.

I think most of the other investigators I have spoken with have also switched to this system. **Jonathan Mitchem, MD - University of Missouri Columbia, MO.**

We currently use the somnosuite and love it! **Julie Hargis, RVT - Cincinnati Children's Hospital Medical Center Cincinnati, OH**

I like how the system uses isoflurane very efficiently and has very clear instructions for all the functions/operations. I like how it is able to use room air. I also appreciate the very good customer service, with its dependable and rapid responses. **Herriet Hseih, PhD Candidate - Harvard University Boston, MA**

I have found the SomnoSuite system just utterly amazing in the simplicity of use, in addition to the economic benefits, most especially in terms of the amount of Isoflurane that I use. **Dr. Stephen Sammut, PhD - Franciscan University Steubenville, IL**

We love the SomnoSuite. We are total converts and have no plans to go back to the standard vaporizer / air tank! **Elizabeth Glover, PhD - University of Illinois Chicago, IL**

The low flow rates are really convenient as we don't have to deal with exhaust. Interface is simple, precise and takes little effort so we can focus on surgery. **Joost Maier, PhD - Wake Forest School of Medicine** *Winston-Salem, NC*

We like about the system: The system's ability to not rely on a tank of oxygen to operate is tremendous. **Dr. Keith Trumbauer - Lexington VA Medical Center** *Lexington, KY*

What I like:

- compact, space saving.
- can run without gas tank but still have the capability to deliver oxygen or some other gas.
- has modules to monitor the animal's condition.
- use a lot less isoflurane compare to the conventional one.
- no routine calibration needed

Ruei-Lung Lin - University of Kentucky College of Medicine *Lexington, KY*

Overall, we are very pleased with the system. So much so, that when we needed to purchase an additional anesthesia system we ended up buying a second SomnoSuite. We really like the fact that we don't have to deal with oxygen tanks and the small amount of isoflurane that is needed for procedures. **Robin Siletzky - University of North Carolina** *Chapel Hill, NC*

I've been using the platform (SomnoSuite) for many years now, and I wouldn't exchange it with anything. **Dr. Antonis Pouliopoulos, PhD - Columbia University** *New York, NY*

We are extremely satisfied with our Somnosuite purchase. This is the third system we have purchased for our lab. All of the researchers who are using those systems like the size of the system, the lower isoflurane exposure, and the incorporation of the RightTemp module for their monitoring purposes. The systems have worked well, and on those occasions when repairs have been needed Kent has been great about working with us to get them repaired in a timely fashion. **Jennifer McAdams, Lab Manager - Purdue University** *West Lafayette, IN*

I love working with you guys. I've always had great service and you are so easy to work with. I recommend your products to our investigators all the time. **Kelsey Johnson - Texas A & M University - Department of Comparative Medicine Program** *College Station, TX*

I will say I am a fan of Kent Scientific and what they offer for small animal surgery solutions. I am a long time user of the Somnosuite and just recently got the new version (touch screen).

First reactions are I REALLY like the ability to control the syringe removal and prime speeds with the knobs, and also the fact that I do not have to calibrate the syringe volume. I have used the system now for about 30 mice surgeries , and over 40 hours of mouse imaging using the Vevo 3100 ultrasound. I love the fact that it used less iso and charcoal. **Chase Kessinger, PhD - Masonic Medical Research Laboratory**
Utica, NY

I love the SomnoSuite. It's extremely easy to use and delivers the minimum amount of anesthetic, which is an important factor in our diseased rodents that are susceptible to anesthetic side effects, especially at higher doses. **Shawn Luttrell, PhD - University of Washington - Institute for Stem Cell and Regenerative Medicine**
Seattle, WA.

I like that its easy to see how much iso is left in the syringe. I love that the unit will use room air or compressed gas. This has been a life saver when the tank runs out. Really nice that it does not need to be calibrated. **John Williamson - University of Virginia**
Charlottesville, VA

Overall the system is super easy to use. It works well, not needing oxygen tanks is a huge plus. **Sam Wojda, PhD - University of Massachusetts**
Amherst, MA

What I like most about the SomnoSuite is the ability to have fine control over the amount of anesthetic delivered to the animal. The ability to interface with peripheral monitoring equipment is also really great for our surgical procedures. Also the system's portability when relocating to other lab spaces, and the ability to use either room air or compressed air is very helpful. **Rebecca Frederick, PhD Candidate - University of Texas at Dallas**
Dallas, TX

I am very happy with SomnoSuite System, because we are able to control many parameters concurrently. Also the experiment we are doing needs to be tightly controlled with body temperature. We are able to save isoflurane, too. We completely replaced the previous isoflurane anesthesia system. **Jeonga Kim, PhD - University of Alabama at Birmingham**
Birmingham, AL

I'm 100% sold on the product.

1. No need for oxygen cylinders. This is nice as inevitably someone in lab fails to let others know that we're almost out. Also, now not a problem with our annual safety evaluation since we don't have compressed cylinders.

2. No need for annual calibration. This is beyond lovely. It is a pain to send off these units which are essential to lab progress once a year to get them serviced and calibrated. My university leaves me alone about my unit because it isn't a traditional unit and doesn't require service/calibration unless we've noticed a problem.

3. When we have had problems (and we have had problems, and my husband lab had a problem), you guys are on it. Very prompt in attention and getting it fixed and returned.

4. The RightTemp module is good. I don't use it as much as I maybe should, but we do use it as a heating pad during surgery (calibrating the temp of the pad, not by the rectal probe). It is nice to not have to nuke and then cool down overly heated wax-like heating pads or fold a normal heating pad into a ridiculously small space.

Amanda L. Sharpe, PhD - University of Oklahoma Health Sciences Center - College of Pharmacy Oklahoma, OK

We love the SomnoSuite system and have had no problems. **Stephen Macknik, PhD - Downstate Medical Center Brooklyn, NY**

I use the SomnoSuite and I love it! **Lori L. Driscoll, PhD - Colorado College Colorado Springs, CO**

I love the SomnoSuite since it is portable, and could be easily brought anywhere. We don't have the specific animal room for the surgery, we have to use the public area. This machine saves our time. **Song Lou, PhD - University of Virginia School of Medicine Charlottesville, VA**

"I have replaced use of our older system with the somnosuite. It saves quite a bit of cost on isoflurane and compressed gas." **Jason Paris PhD - University of Mississippi-School of Pharmacy Oxford, MS**

"I like the temperature probe integration to automatically increase the temperature of the warming pad." **Edwin Wan, Ph.D. - West Virginia University School of Medicine Morgantown, WV**

What I like about the SomnoSuite is the different sized air tight chambers you have that allow me to use the correct size for the model I am analyzing. The system allows me to adjust the concentration delivered to determine dose dependency at different ages/genetics. It also allows me to go between isoflurane and sevoflurane to analyze differences between them. The different sized syringes allow me to only use the amount of anesthesia I need for an experiment which increases safety for myself and the undergraduate/graduate students working in my lab. **Stephanie Schroeder , PhD - Webster University St. Louis, MO.**

We do not have other anesthesia systems, but we would go with SomnoSuite again if we needed another. **Patrick Miller-Rhodes-University of Rochester Rochester, NY**

The small low profile of mouse nose cone is great for our surgery. **Dr. Yumei Feng Earley MD,PhD,FAHA- University of Nevada Reno, NV**

I love that the system is very easy to use. Before purchasing the SomnoSuite, I had anesthetized mice by pentobarbital injection. The SomnoSuite makes this process exponentially easier. **Gina Kang, PhD-University of TexasSan Antonio, TX**

We have been using the SomnoSuite systems since establishing the laboratory 4 years ago. They have been reliable, reduced user exposure to isoflurane below detectable levels, and have allowed us the flexibility to move our surgery spaces around as our research program has grown. The units are straightforward to use and I've enthusiastically endorsed them to my colleagues. **Edmund Hollis II, PhD-Burke Neurological InstituteWhite Plains, NY**

The system is working great and we have had no issues! We now have 3 machines and they are all working great. **Dr. Frank A. Duca PhD-University of ArizonaTucson, AZ**

So far, I'm really enjoying the Somnosuite. It's been really user friendly and reliable. I also like how little space it takes up in my (small!) procedure room. **Erin Limber-AbCellera Biologics Vancouver, BC**

We have been using the system. It has been very handy to have multiple nosecone setups so two of us can work together to get the work done. **Maria Blevins-Wake Forest University** *Winston-Salem, NC*

I like using the Kent Scientific SomnoSuite anesthesia system because it is portable and has a wide range of control parameters that let me titrate the depth of anesthesia in response to real-time measurements. The support team from Kent is very responsive and has given me hands-on help with troubleshooting the anesthesia system. **Laboratory Researcher** *United States*

The SomnoSuite has been working well for us. **Andrew Voss-Wright State University** *Dayton, OH*

We are very satisfied with our SomnoSuite unit. **Juan Pablo Palavicini PhD-University of Texas Health Science Center** *San Antonio, TX*

We love our new system. It has made our work a lot easier. **Jamie Joseph-University of Waterloo** *Kitchener, Ontario*

The system is good. **Peter Panizzi-Auburn University** *Auburn, AL*

I love the Somnosuite system, it only consume a fraction of isoflurane (1.5ml for 3 hour surgery in my hands) compared with traditional vaporizer. Good for environment and experimenter. **Jie Gao PhD-The Ohio State University** *Columbus, OH*

The system is working well! I like the improvements from the last model I used. Thank you! **Lori Newman PhD-Vassar College** *Poughkeepsie, NY*

I love the SomnoSuite. We had one issue that the company efficiently addressed so I am happy with its support as well. **Chris Ward PhD-University of Maryland, Baltimore** *Baltimore, MD*

We love our system. Its very easy to use and convenient! **Andrea Edwards-University of Kentucky** *Lexington, KY*

The system is wonderful. **Jessica Santollo PhD-University of Kentucky***Lexington, KY*

It is an amazing portable small animal anesthetic system. Easy to use and accurate. Customer service and live training is excellent as well. **Sharon McCartney-University of Manitoba***Manitoba, Winnipeg*

The system has been working very well for us. It meets all of our needs and easy to use. In fact, our animal facility decided to purchase one like ours I am told. **Fadi Khasawneh PhD-University of Texas at El Paso***El Paso, TX*

The system is working well and saving us a lot of Isoflurane. **Neil Merovitch-The Hospital for Sick Children***Toronto, ON*

The SomnoSuite system is phenomenal. It is easy to use and minimizes the amount of space needed, and is really efficient in the use of isoflurane! It is one of the best investments I've made for the lab! **Stephen Sammut PhD-Franciscan University of Steubenville***Steubenville, OH*

I really enjoy using the system. It's very predictable and uses much less isoflurane than our traditional anesthesia machine. Easy to dial in weight and percentage without a huge oxygen bottle to deal with. **Chris Gant PhD-University of Kentucky***Lexington, KY*

We have had some challenges optimizing the system for our specific needs, but the support team has been excellent! **Brendan Dougherty PhD-University of Minnesota***Minneapolis, MN*

We love the system. Our surgical space is somewhat limited so having the SomnoSuite is a huge space-saver both in terms of its small footprint and independence from oxygen canisters. The versatility is great, too, in terms of being able to have both induction box and surgical mask hooked up concurrently. We also appreciate the efficiency of the system in terms of isoflurane consumption and are

utilizing the heating pad option. **Dr. Naomi Nagaya-Texas A&M University College Station, TX**

We are all very happy with the performance and ability to move it around. At my current lab we don't have a need for an anesthesia machine yet, but if we ever do, I will make sure we order the SomnoSuite vs. regular anesthesia vaporizer. **Lab Manager and Researcher United States**

We purchased our somnosuite last year and we have been extremely happy with it. We really appreciate administering lower amount of anesthesia - safer for mice and experimenters! **Alban Latremoliere PhD-Johns Hopkins University Baltimore, MD**

We like the system quite a bit. We're looking forward to not having to constantly replace our oxygen tanks, as well as using much less isoflurane per animal. **Luis Martinez PhD-Trinity College Hartford, CT**

The system works very well for our purposes, it has enabled me to keep my animals alive much longer than when attempting the same procedure with injectable anesthetics. **Amanda Fair-University of Michigan Ann Arbor, MI**

I have been using the SomnoSuite for almost a year now, and aside from the motor breaking (which customer service took care of very effectively and efficiently), it has been a great tool for us in the lab. I would (and do) highly recommend it to any other lab doing rodent surgeries. **Michelle Bales PhD-Vanderbilt University Nashville, TN**

We really like the SomnoSuite. It has reduced use of anesthetic and eliminated the need for cumbersome oxygen tanks. The system is compact portable and very effective. **Viji Santhakumar PhD-University of California, Riverside Riverside, CA**

System works great! **Christian Lehmann MD, PhD-Dalhousie University Halifax, NS**

We love our system. **Michelle Cooper-Michigan State University Lansing, MI**

Our machine is running great. **Catheryne Gambill-West Virginia University Morgantown, WV**

The system utilize the very small amount of isoflurane, so it is very safe for the investigators. **Eunhee Chung PhD-University of Texas at San Antonio***San Antonio, TX*

So far, we have enjoyed the system and have appreciated the help we had from Kent in configuring the system when we were having issues! **Keith Trumbauer-Lexington VA Medical Center***Lexington, KY*

The SomnoSuite is working very well for us. **Jeff Edwards PhD-Brigham Young University** *Provo, UT*

What I like about the SomnoSuite is the ability to input the weight of the animal for the machine to calculate the percentage of isoflurane and the oxygen flow. This way the animal doesn't get over-exposed to the gas. It is also very good for the user as there is very minimal isoflurane leak out of the system. Finally, it is very convenient that there is no need for an additional oxygen source. **Rachel Chudoba-Rosalind Franklin University** *North Chicago, IL*

Our Somnosuite has been very effective. Your customer support has been essential in getting out Somnosuite working properly. We greatly appreciate the prompt responses and friendly service. **Andrea Ochoa-Raya-University of Illinois, Chicago** *Chicago, IL*

We love the SomnoSuite system and have had no problems. **Stephen L. Macknik, PhD-SUNY Downstate Medical Center** *Brooklyn, NY*

I love my systems (I bought 2)! I've encouraged lots of others to buy somnosuites because it removes the need for a hood, respirator, or (typically ineffective) downdraft table to use isoflurane. **Amber Southwell-University of Central Florida** *Orlando, FL*

I use the Somnosuite and I absolutely love this system. **Alexander Dizhoor-Salus University** *Elkins Park, PA*

I love the SomnoSuite vaporizer. Using the old vaporizers we would have used a bottle (100ml) every day or two. What a huge safety benefit for our staff as well as the mice. Not to mention the savings on anesthesia. **Mary Rambo-GlaxoSmithKline** *Collegeville, PA*

We really like the system and it has been working well for us so far, so thanks!
Rahul Srinivasan-Texas A&M University *Bryan, TX*

I think I have purchased 5 different setups in the past few years. Including one PhysioSuite and 4 SomnoSuites. System is great! Saves on iso and on gas! A smaller footprint and successful surgeries, win! **Olivier Thibault PhD-University of Kentucky** *Lexington, KY*

We love the SomnoSuite system and use it heavily and exclusively since the acquisition. Low maintenance requirements and portability are main advantages over traditional machine in our hands. **Yury Popov MD, PhD-Harvard Medical School** *Boston, MA*

We really like the SomnoSuite. I use it more than anyone. I like that its quiet and less exposure. **Hallie Harris-Ohio State University** *Columbus, OH*

We do have a SomnoSuite system in lab already and it has been great so far. **Kevin Chan-New York University School of Medicine** *New York, NY*

Everything is working well. Thank you! **Agata Exner-Case Western Reserve University** *Cleveland, OH*

We are very satisfied with the SomnoSuite System (we have two). **Nanyin Zhang PhD-The Pennsylvania State University** *University Park, PA*

We have only used the system a handful of times so far, but we really like it. The fact that we don't need oxygen tanks makes it really mobile and easy to use in different

applications whether it is procedures or hooking up to a micro computed tomography scanner for in vivo imaging. The online videos were really useful for setting up the system and once you figure it out it is very easy to use. **Sam Wojda-University of Massachusetts***Amherst, MA*

We actually currently use the SomnoSuite and have been very pleased with its performance. **Brandon M. Fritz PhD-Indiana University***Zionsville, IN*

We have 5 SomnoSuites on site, and I am beginning to familiarize myself with the units to encourage investigator use. So far I am a huge fan of the low-flow system! My previous experience was with a standard veterinary-style vaporizers, and though they work, they waste so much anesthetic and increase the risk for human exposure. **B. Hibi DVM***United States*

We purchased the SomnoSuite system earlier this year and have been very happy with it! **Andrea Korecki-University of British Columbia***Vancouver, BC*

The SomnoSuite works well for us. **Renzhi Han, PhD-The Ohio State University***Columbus, OH*

The system works great. We have about 6 different users. Happy we don't need to spend money on gas and extra iso. **Michael Coronado-Whitman College***Walla Walla, WA*

It looks great and we cant wait to use it thank you! **Patrick Hannan-Johns Hopkins University***Baltimore, MD*

Love the system. It works perfectly. **Matthew R, Allen PhD-Indiana University***Indianapolis, IN*

I actually just purchased another unit for one of my other labs! You have a great product and my investigators are very happy with their instruments. **Ruthie McNeill-Baylor College of Medicine***Houston, TX*

So far, the machine has exceeded our expectations. It is incredibly convenient to have a machine that can use ambient air during anesthesia and minimizes the effort required for its use. The starter suite is incredibly helpful for a lab like ours -- we have recently moved into a new space and needed to be self-sufficient quite quickly. I can anticipate heavy use of this machine once we begin our new animal studies. **Angelina Regua PhD-Wake Forest University***Winston-Salem, NC*

We have been using Somnessuite for few months and we are very impressed with this unit. Less isoflurance use, easy to use and less effects on users. It is also easy to move anywhere. **Laboratory Researcher***United States*

We love the new machine. It does exactly what we need and we appreciate not having to have compressed O₂. **Jennifer Lock-Harvard University***Boston, MA*

We are very happy with the SomnoSuite system. It was recommended to us by a colleague here at Iowa. **Rory A Fisher PhD-University of Iowa***Iowa City, IA*

We did purchase one for our facility and then one of our researchers purchased one about a month later.

We are very pleased with the system. The researcher uses the machine weekly for CT scans and is very happy with the anesthetic machine also. There are nothing but great comments from everyone who is trained to use the system. **Shawn Bukovac-Brock University***St. Catharines, ON*

We love the Somnosuite, I helped to get the system up and running and train all of the personnel on the Somnosuite while I was in the lab. It really changed the way we performed surgeries. **Morgan Kennedy -University of Iowa***Iowa City, IA*

I LOVE the SomnoSuite! It is particularly useful for mice anesthesia during hemorrhage studies, when adjustment of isoflurane inhalation level is needed to prevent hemodynamic collapse. I believe this represents a significant refinement for rodent inhalation anesthesia (especially for mice) while providing enhanced engineering level protection for animal care users providing inhalation anesthesia. **R. Wayne Barbee PhD-Virginia Commonwealth University***Richmond, VA*

The system works well and we like it. Perhaps we will get a bigger syringe so it can be used for longer in inductions without having to refill. **Alessandro Luchetti-UCLA***Los Angeles, CA*

We like the SomnoSuite a lot! Easy to handle and no calibration needed and it used less isoflurane than traditional anesthetizers. **Bjorn Bauer PhD-University of Kentucky***Lexington, KY*

We have not had a chance to use our equipment yet. We've used the somno suite in someone else's lab though and love it! **Michael Orr-Emory University***Atlanta, GA*

It's great. The main limitation is the syringe – the isoflurane does not last very long. Have to change it very often. To be clear, the time that the isoflurane lasts depends on the chamber size and other factors. **Jatin Roper, MD-Duke University***Durham, NC*

Love the system! **Joost Maier-Wake Forest University***Winston-Salem, NC*

Our SomnoSuite is working great! My absolute favorite thing about it is the fact that I cannot smell the isoflurane in the room at all! So much safer for me and my staff! **Kristen Zuloaga, PhD - Assistant Professor, Department of Neuroscience & Experimental Therapeutics***New York, United States*

I don't have any problems with the SomnoSuite. I've used it numerous times in the past few months and it always works flawlessly. **Eugene Dimitrov MD, PhD - Rosalind Franklin University of Medicine and Science***Illinois, United States*

Overall we really like the ventilator (in all of the devices) and the SomnoSuite for the anaesthesia delivery...easy, intuitive, efficient, great stuff! We also really like the heat pads, rectal probes, and pulse ox. **Deputy-Named Veterinary Surgeon & Veterinary Anesthetist***United Kingdom*

I can set up the SomnoSuite on my bench without taking up so much space. I LOVE IT! I can carry the system to the mouse room so easily too. I may buy one more... Definitely a lifesaver for our research. We can save on isoflurane and charcoal filters, which is also very nice. **Takako Jones, Assistant Professor - University of Massachusetts Medical School***Massachusetts, United States*

The SomnoSuite is everything it claims to be and more: it uses a fraction of the isoflurane, and as such, minimizes exposure to investigators, all while maintaining perfectly stable levels of anesthesia in our adult rats. The only thing better than having one SomnoSuite would be having two! **Adriana Caballero, PhD - RFUMS/The Chicago Medical School***Illinois, United States*

I liked the products; I have never been disappointed by Kent Scientific instrumentation. Thank you very much for letting us try them out. These would be great to have. **Stefano Tarantini - University of Oklahoma Health Sciences Center (OUHSC)***Oklahoma, United States*

I love my SomnoSuite! Kent gave me step-by-step guidance. It's all I use for rodent anesthesia now. It is definitely one of the best systems we've purchased that has increased user safety from excessive WAG. **Amanda Dillard, RVT - Wake Forest University School of Medicine***North Carolina, United States*
